

sheQuilibrium®

Working towards compliance together

STEP 1

1: LAW AND REGULATIONS

European and Dutch legislation in the area of health and safety, and environment is extensive, complex and constantly changing. It is important that your organisation is and remains aware of all relevant changes. With sheQuilibrium® we ensure the right balance between legal obligations, and a feasible practice.

2: CUSTOMISED SELECTION

Our highly experienced advisors select the legislation applicable to the company based on an intake interview and a company visit, and incorporate this into sheQuilibrium®, our customised compliance management system.

STEP 2

4: IMPLEMENTATION AND TRAINING

Compliance with rules and standards is closely related to the professional, correct and ethical behaviour of employees in every layer of an organisation. With interactive training, coaching, and the facilitation of knowledge sharing, we help companies effectively acquiring the right knowledge, skills, and behaviour to implement compliance management as a second nature. Employees are encouraged by being given insight into the total progress and their own contribution to continuously improving the compliance of your organisation.

STEP 3

3: TASKS DIVIDED BETWEEN DEPARTMENTS

In our sheQuilibrium® database, the legislation is translated into clear requirements that are comprehensible for everyone. Subsequently, tasks can be linked and assigned to specific departments and/or people. sheQuilibrium® offers the possibility of progress monitoring by showing who should take which action. A dashboard for managers makes monitoring easy.

STEP 4

STEP 5

5: COMPLIANCE MANAGEMENT ACCORDING TO ISO 37301

Compliance management is one of the most important pillars of good management. The ISO37301 standard gives direction to organisations to comply its activities with laws and regulations. It contains the guidelines for establishing, developing, implementing, evaluating, maintaining, and improving a compliance management system. sheQuilibrium® is the right tool for securing the compliance process in your organisation. Risks, obligations, control measures, actions etc. are all included. It is also possible to, where desirable, add company-specific obligations, a personal RI&E plan, and company regulations.
